KIRINYAGA UNIVERSITY

SSE 2105: ADVANCED OBJECT-ORIENTED PROGRAMMING
COURSE OUTLINE

SCHOOL	School of Pure and Applied Sciences
DEPARTMENT	Pure and Applied Sciences
PROGRAMME	Bachelor of Science in Software Engineering
YEAR	3
SEMESTER	1
UNIT CODE	SSE 2105
UNIT TITLE	Advanced Object-Oriented Programming
LECTURE HOURS	45
PRE-REQUISITES	None
LECTURER'S NAME	Mr. Harun Kamu
LECTURER'S CONTACTS	TEL: 0713316599 EMAIL: kariuki.harun@gmail.com

Welcome Message

Welcome to the course SSE 2105: Advanced Object Oriented Programming that enables students use object-oriented design methods and programming techniques to produce solutions for a wide range of problem specifications.

Learning Outcomes

1. To learn the basic syntax and semantics of the Java language.
2. To understand the concepts of classes and objects.
3. Design, code, and implement, simple to intermediate level standalone OOP applications.

Teaching Methodology

- Blended learning - combines both online and physical classroom learning
- Case analysis
- Group discussions

Instructional Materials

- White board
- LCD Projector
- Smarboards
- Masomo Portal

Course Evaluation

- CAT 1 = 10 %
- CAT 2 = 10 %
- Assignments = 10 %
- Examination = 70%
- Pass mark = 40 %

COURSE OUTLINE

S/N.	Week / Sub-Topic	Coverage / Activities	Remarks
1	Introduction to object-oriented programming paradigm	Definitions- encapsulation, abstraction, classes, objects, polymorphism, inheritance, data hiding. Examples of object-oriented programming languages. Merits and demerits of OOP. Comparison between procedure-oriented programming and OOP Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
2	Introduction to Java Programming	Why learn Java, application & benefits. Overview of Java, installing & setting up Java Java basic concepts; identifiers & keywords, Java data types, operators, expressions, namespace, type casting, I/O statements. Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
3	Java Control Structures	Decision structures- if, if..else, nested if. Loops - for, while, do..while, nested loops. Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
4	Java Functions & Arrays	Declaring and defining functions Calling functions Parameters and parameter passing Declaring and defining arrays- One dimensional and multidimensional arrays Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
5	Week 5	CAT ONE/ ASSIGNMENT ONE	
6	Objects and Classes	Introduction	

		Defining class in Java Data members, member functions, access specifiers, Creating objects in Java. Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
7	Java Inheritance	Introduction Types of inheritance Implementing inheritance in Java Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
8	Java Polymorphism	Introduction Method and operator overriding and overloading Implementing polymorphism in Java Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
9	Java Encapsulation and Abstraction	Introduction Why encapsulation? Ways of achieving abstraction Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
10	Java Input/Output	Creating and using GUIs, GUI Components, Adding components to containers Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
11	Week 10	CAT TWO/ ASSIGNMENT TWO	
12	Java Applets	Introduction to Java Applets, Drawing strings, applets, lines and other basic shapes, Putting applets on the web. Topic Activity (Group Discussions, summarize every week's topic on what you have learnt &	

		practice exercises)	
13	Advanced Java Programming	Java database connection, Data insertion, retrieval, updates and deletion from Java forms to database. Topic Activity (Group Discussions, summarize every week's topic on what you have learnt & practice exercises)	
14	Week 13	REVISION FOR EXAMS	
15	Week 14	END OF SEMESTER EXAMINATIONS	

COURSE TEXTBOOKS

1. Savitch W. (2011). Java an Introduction to Problem Solving and Programming, Prentice Hall. ISBN: 978-0534359492.
2. Savitch, W. (2009). Java - An introduction to problem solving and programming (6th Ed), Prentice Hall ISBN: 978-046783222492.
3. Deitel and Deitel. (2010) Java. How to Program by (6th Ed). ISBN: 978-6789023456.
